

TwoNav iPhone - Communication with CompeGPS Land 7

In this tutorial we will see how to simply communicate with your iPhone on your PC, through the CompeGPS Land software (Full or basic version). You will be able to quickly transfer tracks, routes, waypoints and maps from one to another.

Activate FTP

CompeGPS Land can perform and direct communication with an iPhone. Follow next steps to do it: Launch TwoNav in your iPhone. Important: Be sure that your iPhone is connected to Wifi net where computer can also access.

Activate FTP in TwoNav iPhone: Go to "main menu >Settings >FTP" in TwoNav iPhone. You will see the properties of your iPhone as FTP server (picture 2).

CompeGPS Land 7

In CompeGPS Land, go to: 'Communications > Connect to iPhone' and choose one of these options:
 - Let CompeGPS use 'Bonjour' to detect iPhone: Program will try to find the iPhone.
 You will only need to enter the password displayed on your iPhone (picture 2).

Picture 2

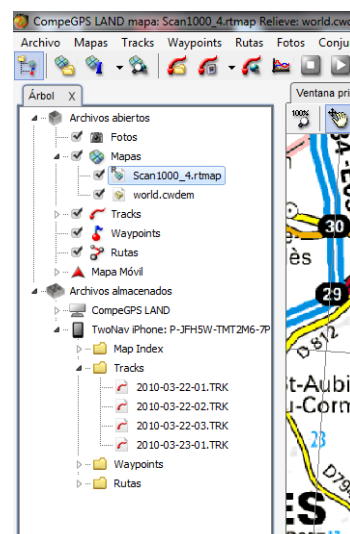

- I will write the IP of my iPhone: Search iPhone manually.
 Enter the requested fields with the properties shown in your iPhone.

- Host (specific to each connection)
- Port
- User
- Password.

Access to your data

Once connected, you will be able to see the content of TwoNav iPhone's data folders in CompeGPS Land data tree and transfer data by right click on element to transfer (Picture 3).

Done!
